

Managed Security Services

FIT Cybersecurity is a Managed Security Service Provider (MSSP). Our team specializes in becoming the cybersecurity department for an organization, protecting them from threats and data breaches. We defend their jobs and valuable assets through a powerful combination of highly skilled security engineers, leading-edge tools and services, and cyber awareness education.

Security-as-a-Service

FIT Cybersecurity has a state-of-the-art Security Operations Center (SOC) in the United States. Cybersecurity analysts investigate possible data breaches, attacks, and risks 24/7/365. When alerts or anomalies are detected, our experts quickly investigate to verify the risk. All incidents are assessed and documented, and then our experts will notify and support your IT department with the necessary information to contain a breach.

Managed SIEM & Traffic Analyzer

A Security Information and Event Manager (SIEM) provides real-time analysis of security alerts generated from all sources in an organization's environment, allowing us to identify anomalies. Our cyber analysts will install, configure, monitor and maintain the SIEM tool, or we can use a client's existing SIEM tool. We also use a traffic analyzer to capture all network traffic entering and leaving the network; this allows us to detect malware, ransomware, or other strange downloads.

Stolen Credential Monitoring

One of the most common ways that criminals get into a network or email system is via stolen credentials, often bought on the darkweb. Our team monitors our clients' domains on the darkweb. If we identify any stolen credentials, we can advise our clients on the best way to close that security gap.

vCISO Consulting & Security Business Planning

Our team provides monthly reports of incidents as well as a real-time dashboard via ServiceNow. We also take a proactive approach to growth with a Security Business Plan: a structured roadmap to map out cybersecurity gaps and provide recommendations on how your risk profile can be reduced.

FIT Cybersecurity provides a full suite of service to help organizations achieve a complete cybersecurity posture and meet their regulatory compliance needs.

- 24/7 Cybersecurity Monitoring
- Real-time Dashboard through ServiceNow
- Security Technology Business Planning
- Dedicated Cybersecurity Team
- Fully Managed & Maintained Toolsets
- Turnkey Packages
- Shared Savings Partnerships
- Security Assessments
